

What is the High Risk Ontario Breast Screening Program (OBSP)?

- Annual breast MRI and mammogram screening
- For women between the ages of 30 – 69 who are at high risk

What is “high risk”?

- The average breast cancer risk for women is approximately 12% (1 in 8 women) and it most commonly affects women over age 50
- High risk women have a lifetime risk of breast cancer that is equal to or greater than 25%. Risk assessment for this program is done through a consultation with a genetic counsellor.

Mammogram

What is it?

A mammogram is a low dose X-ray that can find changes in the breasts

What to expect

- Wear a comfortable, two-piece outfit as you'll be asked to remove your top
- Avoid deodorant, talcum powder, or lotion under your arms or on your breasts
- Some women may experience discomfort while having a mammogram
- Visit this link on how to prepare for a mammogram:
<https://www.hamiltonhealthsciences.ca/share/mammogram-tips/>

Breast MRI

What is it?

Magnetic resonance imaging (MRI) uses magnets and radio waves to create pictures of the structures in the breast without radiation

What to expect

- Do not wear perfume or strongly scented products
- Leave jewelry and metal accessories (hair pins, watches, etc.) at home
- IV contrast dye injection will be given to help get a better picture of the breasts
- Talk about sedation before your appointment with your doctor if you are anxious or claustrophobic
- If you take a sedative, take 45 mins-1 hour before your MRI. Plan to have someone drive you home.

Why do I need to have both a mammogram and an MRI?

- The combination of mammogram and MRI has the highest sensitivity for detecting breast cancer in high risk individuals
- MRI alone is not recommended as a screening test because it can miss some cancers that a mammogram would find

What happens after screening?

- All results will be forwarded to your family doctor
- OBSP staff will contact you if you need further follow-up, such as extra images or biopsies
- You will receive a reminder letter annually when it is time for screening; if you do not receive a letter, contact your site

Frequently Asked Questions

WHAT IF...

...I have a new address/phone number/
family doctor?
...I am pregnant or have finished breastfeeding?
...I need to reschedule an appointment?
...I have not heard about my initial appointment?
...I no longer want to be a part of the
High Risk Screening Program?

Please call the appropriate
high risk screening site below:

- Juravinski Hospital/
CIBC Breast Assessment
Centre:
905-521-2100 ext. 43148
- St. Joseph's Hospital
(Hamilton):
905-522-1155 ext. 35281
- Niagara Health- St.
Catharines Site:
905-378-4647 ext. 46345

...I am moving and need to
change my screening site?

Please contact your nurse navigator at
905-521-2100:

- Mandi Hallchurch – ext. 43149
- Elizabeth Vandesompele – ext. 43165

Please contact your family doctor
as soon as possible.

... I have questions about my screening
results, biopsy, or follow-up?
... I am having/worried about breast symptoms
(i.e. new lump, skin changes/dimpling,
redness, nipple discharge, etc.)

...there are changes to my
family history of cancer?
...I have questions about
genetic testing?

Please contact your genetic
counsellor at 905-521-2100:

- Corissa Androich – ext. 65924
- Erin Kelter – ext. 43160
- Kowuthamie Tharma – ext. 43159
- Rose Venier – ext. 64224
- Lorrie Lynch – ext. 64224
