

Contrast Media (eGFR 30 and under)

Date: _____

Patient's Name: _____

Referring Doctor: _____

You have just had an injection of contrast media (x-ray dye) to help the radiologist see your blood vessels and organs on a CT (CAT) Scan.

Instructions for going home

1. Do not take any medications that contain metformin for 48 hours after your CT Scan. See the chart below for the names of these medications.

Trade name	Generic name
Glucophage, Glumetza, Glucophage XR, Fortamet	Metformin
Kazano	Alogliptin/Metformin
Invokamet	Canagliflozin/Metformin
Xigduo XR	Dapagliflozin/Metformin
Metaglip	Glipizide/Metformin
Glucovance	Glyburide/Metformin
Jentaducto	Linagliptin/Metformin
Acto Plus Met, Acto Plus Met XR	Pioglitazone/Metformin
Prandimet	Repaglinide/Metformin
Avandamet	Rosiglitazone/Metformin
Kombiglyze	Saxagliptin/Metformin
Janumet, Janumet XR	Sitagliptin/Metformin

2. Contact your referring doctor to have follow-up blood work (eGFR) done to check your kidney function.

This blood work must be done in 2 days after your test (3 days if your test was on a Friday, or 4 days if your test was on a Thursday or long weekend).
