

COVID -19 Symptoms			
Respiratory Symptoms		Unexplained Non- Respiratory symptoms	
Fever/ Chills* AND Respiratory symptoms: <ul style="list-style-type: none"> • Cough, sore throat, difficulty swallowing • Shortness of breath, difficulty breathing • Runny nose, nasal congestion *for patients >65 years of age fever/chills are not required		<ul style="list-style-type: none"> • Nausea, vomiting, diarrhea, abdominal pain • Decrease/loss of taste/smell • Conjunctivitis • Acute functional decline(e.g. delirium, falls) • Headaches • Fatigue/malaise/myalgia 	
COVID RISK			
<ol style="list-style-type: none"> 1. Any new or worsening respiratory symptom, influenza like illness, <u>regardless of underlying diagnosis</u>, vaccine status or COVID history; 2. Any other non-respiratory COVID symptom, <u>not explained by underlying diagnosis</u>, regardless of vaccine status or COVID history; 3. COVID Exposed in the last 10 days (including outbreak exposure); exception patients with Resolved COVID; 4. COVID test positive in the last 10 days; 5. In COVID precautions from another facility or in home isolation for COVID 			
NEGLIGIBLE RISK			
<ol style="list-style-type: none"> 1. No exposures, no symptoms; 2. Asymptomatic with Resolved COVID; 3. Initially COVID Risk (due to symptoms), COVID test returned negative; no further testing required per MD. (Excludes COVID Exposed patients); 4. ALL asymptomatic patients requiring an ongoing/ intermittent AGMP, regardless of vaccine status 			
TESTING			
<p>Note: Asymptomatic Resolved COVID patients do not require testing</p>			
Reason for test	Testing	Isolation	If resolved COVID
Symptomatic testing			
Respiratory symptoms/ ILI regardless of underlying diagnosis (no ongoing/intermittent AGMPs)	Respiratory Virus PCR	Droplet-Contact with well-fitted medical mask or N95 based on PCRA*	Test any patient with new respiratory symptoms
Non-respiratory COVID symptoms, not explained by underlying Diagnosis	COVID-19 PCR	Droplet-Contact with well-fitted medical mask or N95 based on PCRA*	Test any patient with new symptoms
Exposure testing			
Asymptomatic Exposure to COVID-19 in last 10 days, regardless of vaccine status	COVID-19 PCR as soon as possible following exposure and 5 days after first test	Droplet-Contact with well-fitted medical mask or N95 based on PCRA*	Do not need to isolate or test unless patient is symptomatic
Asymptomatic Surveillance testing			
Asymptomatic patients needing ongoing/intermittent AGMP	COVID-19 PCR when initiating AGMP (do not need to have result to start AGMP)	Treatment in progress isolation guidelines	Do not test COVID resolved patients
<p>Resolved COVID: Any patient that had COVID (positive RAT/PCR test) more than 10 days prior, no longer in isolation, AND has recovered, AND is within 60 days of their positive test result.</p> <p>COVID vaccinated: Patients who report receiving 2 doses of a COVID vaccine with the second dose greater than 2 weeks prior</p> <p>*AGMP care requires the use of a fit-tested N95 respirator</p>
